Oryza sativa chromosome I2 sequencing
                                                                                                                                                                  The following sequence is oriented from the T7 to the SP6 end. IMPOYTANT: This sequence is unfinished and does not necessarly represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continue. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage, etc. . even if efforts are made to eliminate these contaminating sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   168864 bp DNA linear HTG 07-MAR-2003 OSJNBA0083D13, *** SEQUENCING IN PROGRESS ***.

* NOTE: This is a 'working draft' sequence. It currently consists of I contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and the accession number will be preserved.

* I 152159: contig of 152159 bp in length.

Oryza sativa chromosome 12 sequencing
AL Submission

AL Submitted (OB-MAY-2002) The Institute for Genomic Research, 9712

Medical Center Dr. Rockville, MD 20850, USA

On May 8, 2002 this sequence version replaced gi:20146765.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 7 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 21285; contigs of 21285 bp in length

* 21386 58264: contigs of 18879 bp in length

* 58265 58364: gap of unknown length

* 71534 71633: gap of unknown length

* 71834 71839: contigs of 1217 bp in length

* 71851 73850: gap of unknown length

* 82967 83066: gap of unknown length

* 81867 118460: contigs of 35194 bp in length

* 118461 118560: gap of unknown length

* 118461 118560: gap of unknown length

* 118461 118560: gap of unknown length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HTG 07-MAR-2003

resistance protein A precursor (609 aa), fasta scores;
opt: 170 z-score: 1884 E(): 0.0036, 27.3% identity in 205
aa overlap. Also weakly similar to the blood coagulation
factors which are structurally related to the multicopper
oxidases. Similar to the N-terminus of TR:O53858
(EMBL:AL022004) Mycobacterium tuberculosis hypothetical
protein (504 aa) (52.1% identity in 323 aa overlap).
Contains PS00079 Multicopper oxidases signature 1 and
PS00080 Multicopper oxidases signature 2 (the latter
suggesting copper-binding)"
//transl_table=11

                       TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMMENT
                                                                                                                                                                                                                                                           The following sequence is oriented from the T7 to the SP6 end.

IMPORTANT: This sequence is unfinished and does not necessarly represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage, etc. . even if efforts are made to eliminate these contaminating sequences.

The nucleotide sequence of this BAC clone was generated by combining Syngenta and Genoscope sequencing data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bentley, S.D., Chater, K.F., Cerdeno-Tarraga, A.M., Challis, G.L., Thomson, N.R., James, K.D., Harris, D.E., Quail, M.A., Kieser, H., Harper, D., Bateman, A., Brown, S., Chandra, G., Chen, C.W., Collins, M., Cronin, A., Fraser, A., Globe, A., Hidalgo, J., Hornsby, T., Howarth, S., Huang, C.H., Kieser, T., Larke, L., Murphy, L., Oliver, K., O'Neil, S., Seeger, K., Saunders, M.A., Rutherford, K., Rutter, S., Seeger, K., Saunders, D., Sharp, S., Squares, S., Taylor, K., Warren, T., Wiezzorrek, A., Woodward, J., Barrell, B.G., Parkhill, J. and Hopwood, D.A.

RGP. Frotein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP2.0. ESTS represent the identified cDNA sequences using BLASTP2.0. with the corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative' and '-like protein. A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The sequence of Foofs6GGQ4 clone has an overlap with OJ1174_DD5 (DDBJ: AP003118) clone at the position 10,0138 of 5, end. The sequence of Foofs6GQ4 clone has an overlap with PQ489AD1 (DDBJ: AP002484) clone at the position 58,198 of OJ1174_DD5 end. The sequence of this clone at the position 19,689 to 141,983 of 3, end. The sequence of this clone ends at the position 19,295 of PQ489AD1. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.da.affer.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /trānslation="MOPRRRQQQQSILSFLOKKPAAAAGEEGATPERPPRAASVA

Alfano, J.R., Klm, H.S., Delaney, T.P. and Collmer, A.
Evidence that the Pseudomonas syringae pv. syringae hrp-linked hrmA
gene encodes an Avr-like protein that acts in an hrp-dependent
manner within tobacco cells
MOL. Plant Microbe Interact. 10 (5), 580-588 (1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /trānslation="mempalafdDKGACNMIIDKAFALTLLRDDDTHQRLLLIGLLEP

He Pseudomonas syringae Hrp pathogenicity island has a tripartite
mosaic structure composed of a cluster of type III secretion genes
bounded by exchangeable effector and conserved effector loci that
contribute to parasitic fitness and pathogenicity in plants
Proc. Natl. Acad. Sci. U.S.A. 97 (9), 4856-4861 (2000)

Alfano,J.R., Klm,H.S., Delaney,T.P. and Collmer,A.
Evidence that the Pseudomonas syringae pv. syringae hrp-linked hrmA
gene encodes an Avr-like protein that acts in an hrp-dependent
manner within tobacco cells
Mol. Plant Microbe Interact. 10 (5), 580-588 (1997)
